

As a Team Pilot, how do I set up my TNT line builder?

As a Team Pilot, how do I set up my TNT line builder?

In the TNT Global Market plan, you are a Team Pilot when you have completed six vertical lines of Members.

As a Team Pilot your second-phase line-builder becomes active and automatically pre-filled with the IDs# of your first generation members to help their respective line-builders to complete their six vertical line or their downline members if they already have six-vertical lines completed.

And so on in the deeper generation to help all members progressively.

But let's say one of your first-generation members become inactive and after 90 days, they are sent to the bottom pool as per the active member rule.

In that case, the IDs should be automatically replaced with the member who have replaced them in your first generation.

If you have more than six vertical lines, you should merge some vertical lines into one to build no more than six vertical lines.
